Re: WT 14-17; Cricket 700 MHz wireless license

Dear Federal Communications Commissioners,

My business here in Trevor is in a concrete block building that can interfere with wireless signals. Every so often, customers at my bar will have problems with the signal and have to go outside to either make calls or access something on the web. I know that Cricket has been trying to open up their spectrum on the lower end of the 700 MHz band, which could help millions of wireless users all the way from Indiana to here in Wisconsin. The great thing about that frequency is its ability to cut through dense urban environments, meaning it could provide my business with much better service than it has now. This would be helpful for my business, and I imagine it would for many others as well.

Over ten million wireless users would stand to benefit if this spectrum is opened up, but the FCC needs to take action soon. So many people are using mobile devices like iPads these days, from little kids to business owners and everyone in between. Without the bandwidth to support all this increased traffic, we will get to the point where everybody has unreliable and slow service. I can see great benefits for my business with increased bandwidth available. Fewer customers losing their signal would be nice, and I may even get a jukebox that will run a bit faster if it uses wireless service.

I know how the government can be with many things, eventually coming around to what the people want, but it can sure take a while. We should not waste on this, though, because people aren't going to just stop using their mobile devices because we don't have the bandwidth needed to support them. Why wait for service to get worse when spectrum is available for companies to take advantage of now? Cricket owns the license to this spectrum and we should be allowed to use it, regardless of the slight interference it may cause for a few antenna users. They can make adjustments, and it's doubtful they watch the one affected channel much anyway.

Let's get this issue resolved now and do the sensible thing. Please allow Cricket to put its 10 MHz of spectrum on the mobile broadband network. This would improve service for millions, so we should not allow a tiny few to hold this up. Thank you for considering my comment.

Sincerely,

Richard Corduan  
Owner
